

## Supplementary Appendix

Supplement to: Ozdemirli M, Loughney TM, Deniz E, et al. Indolent CD4+ CAR T-cell lymphoma after ciltacab-  
CAR T-cell therapy. N Engl J Med 2024;390:2074-82. DOI: 10.1056/NEJMoa2401530

This appendix has been provided by the authors to give readers additional information about the work.

## Table of Contents

<i>Authors and affiliations</i> -----	2
<i>Supplemental Methods</i> -----	3
<i>Figure S1: Sequence of the lentivirus carrying the anti-BCMA CAR-T expressing cassette and the corresponding genomic flanking regions at the integration site.</i> -----	7
<i>Figure S2: Biological pathways of the upregulated genes with somatic CNV.</i> -----	8
<i>Table S1: Lists of germline SNPs, InDels, SVs, and CNVs in 2015 Blood Sample.</i> -----	9
Table S1A: Germline single nucleotide polymorphisms (SNP) in the 2015 blood.-----	9
TableS1B: Germline insertions/deletions (InDel) causing start-loss, stop-gain, or frameshifts in the 2015 blood.-----	14
Table 1SC: Germline structural variants (SV) encompassing exonic regions in the 2015 blood.-----	27
Table 1D: Germline copy number variations (CNV) encompassing exonic regions in the 2015 blood.--	31
<i>Table S2: Lists of somatic SNPs, InDels, SVs, and CNVs in 2023 duodenal tumor but not in 2015 blood.</i> -----	42
Table S2A: Somatic single nucleotide polymorphisms (SNP) causing start-loss, stop-gain, or frameshifts in 2023 duodenal tumor but not in 2015 blood.-----	42
Table S2B: Somatic insertions/deletions (InDel) causing start-loss, stop-gain, or frameshifts in 2023 duodenal tumor but not in 2015 blood.-----	43
Table S2C: Somatic structural variants (SV) encompassing exonic regions in 2023 duodenal tumor but not in 2015 blood.-----	44
Table S2D: Somatic copy number variations (CNV) encompassing exonic regions in 2023 duodenal tumor but not in 2015 blood.-----	45
<i>Table S3: List of the genes with expression values detected by targeted-RNAseq.</i> -----	72
<i>Supplemental References</i> -----	109

## Authors and affiliations

<b>Author</b>	<b>Affiliations</b>	<b>Contributions</b>
Metin Ozdemirli	Pathology, MedStar Georgetown University Hospital, Washington, DC, USA	Diagnosed the case, organized the study, wrote the initial draft and decided to publish.
Thomas M Loughney	Gastroenterology, MedStar Georgetown University Hospital, Washington, DC, USA	Primary gastroenterologist for the patient, wrote part of the paper and approved final version.
Emre Deniz	Lombardi Comprehensive Cancer Center, Georgetown University Medical Center, Washington, DC, USA	Analyzed the whole genome data, found the virus integration site, wrote part of the paper and approved final version.
Joeffrey J Chahine	Pathology, MedStar Georgetown University Hospital, Washington, DC, USA	Performed PCR studies and wrote part of the paper and approved final version.
Maher Albitar	Genomic Testing Cooperative, Irvine, CA, USA	Performed initial NGS sequencing and confirmed the presence of CAR-T fusions wrote part of the paper and approved final version
Stefania Pittaluga	National Institutes of Health, Bethesda, MD, USA	Confirmed the diagnosis, provided 2015 blood DNA sample, wrote part of the paper and approved final version.
Sam Sadigh	Brigham and Women's Hospital, Boston, MA, USA	Confirmed the diagnosis, wrote part of the paper and approved final version.
Philippe Armand	Dana-Farber Cancer Institute, Harvard Medical School, Boston, MA, USA	Treating the patient for lymphoma, wrote part of the paper and approved final version.
Aykut Uren	Lombardi Comprehensive Cancer Center, Georgetown University Medical Center, Washington, DC, USA	Analyzed the whole genome sequencing data, found the virus integration site, wrote part of the paper and approved final version.
Kenneth C. Anderson	Dana-Farber Cancer Institute, Harvard Medical School, The Jerome Lipper Multiple Myeloma Center, Boston, MA, USA	Treating the patient for myeloma, wrote part of the paper and approved final version.

## Supplemental Methods

Diagnostic workup included routine histologic examination of formalin-fixed paraffin-embedded tissue sections, immunohistochemical analysis using Dako omnis automated system and multi-color flow cytometric analysis using BD FACSCanto II.

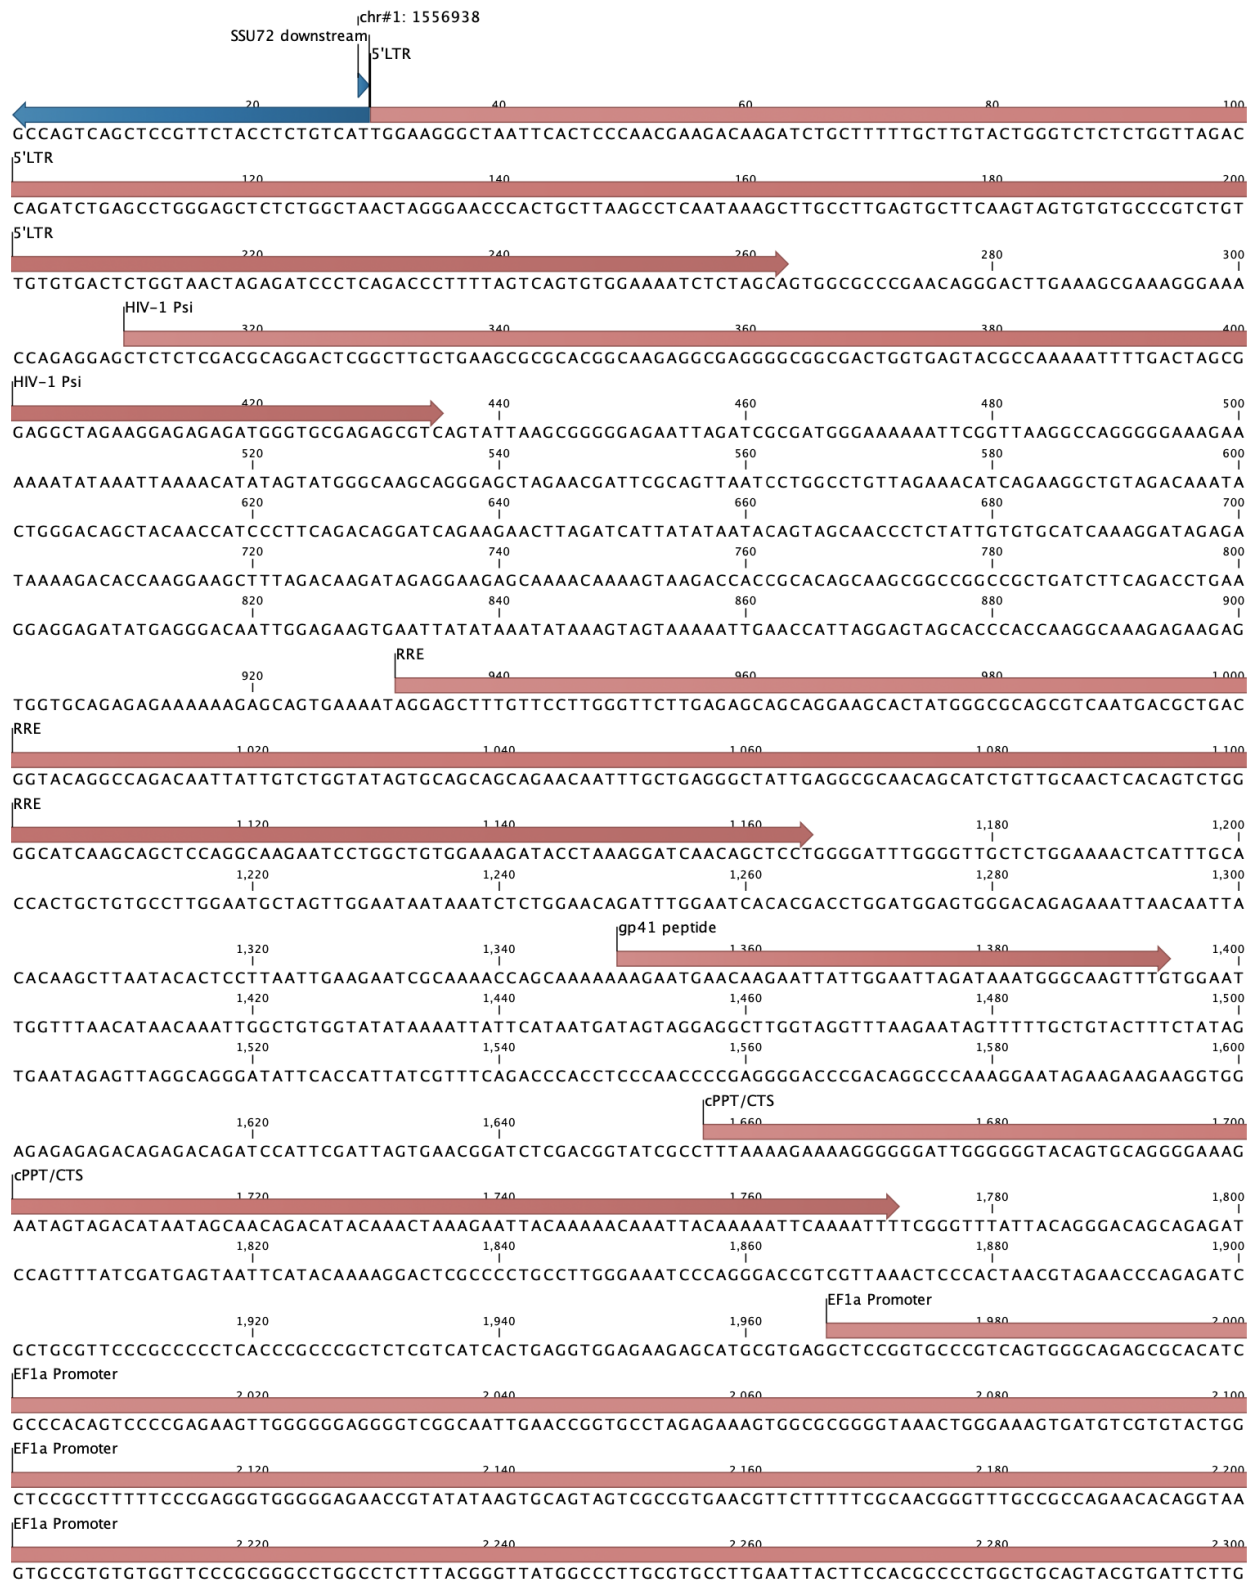

**Polymerase Chain Reaction Analysis:** The T-cell receptor gamma (*TCRG*), T-cell receptor beta (*TCRB*), immunoglobulin heavy chain (IgH) and kappa light chain loci were amplified from genomic DNA by using multiplex primer PCR of InVivoScribe Clonality Assays. Fluorochrome dye-labeled specific primers permitted precise fragment sizing of PCR products by capillary electrophoresis (3500 Genetic Analyzer, Applied Biosystems). The performance characteristics of this assay has been independently determined by a European collaborative study involving 32 diagnostic PCR laboratories (BIOMED-2 Concerted Action), testing hundreds of clinical samples defined according to the WHO classification (van Dongen 2003 and Langerak 2012).

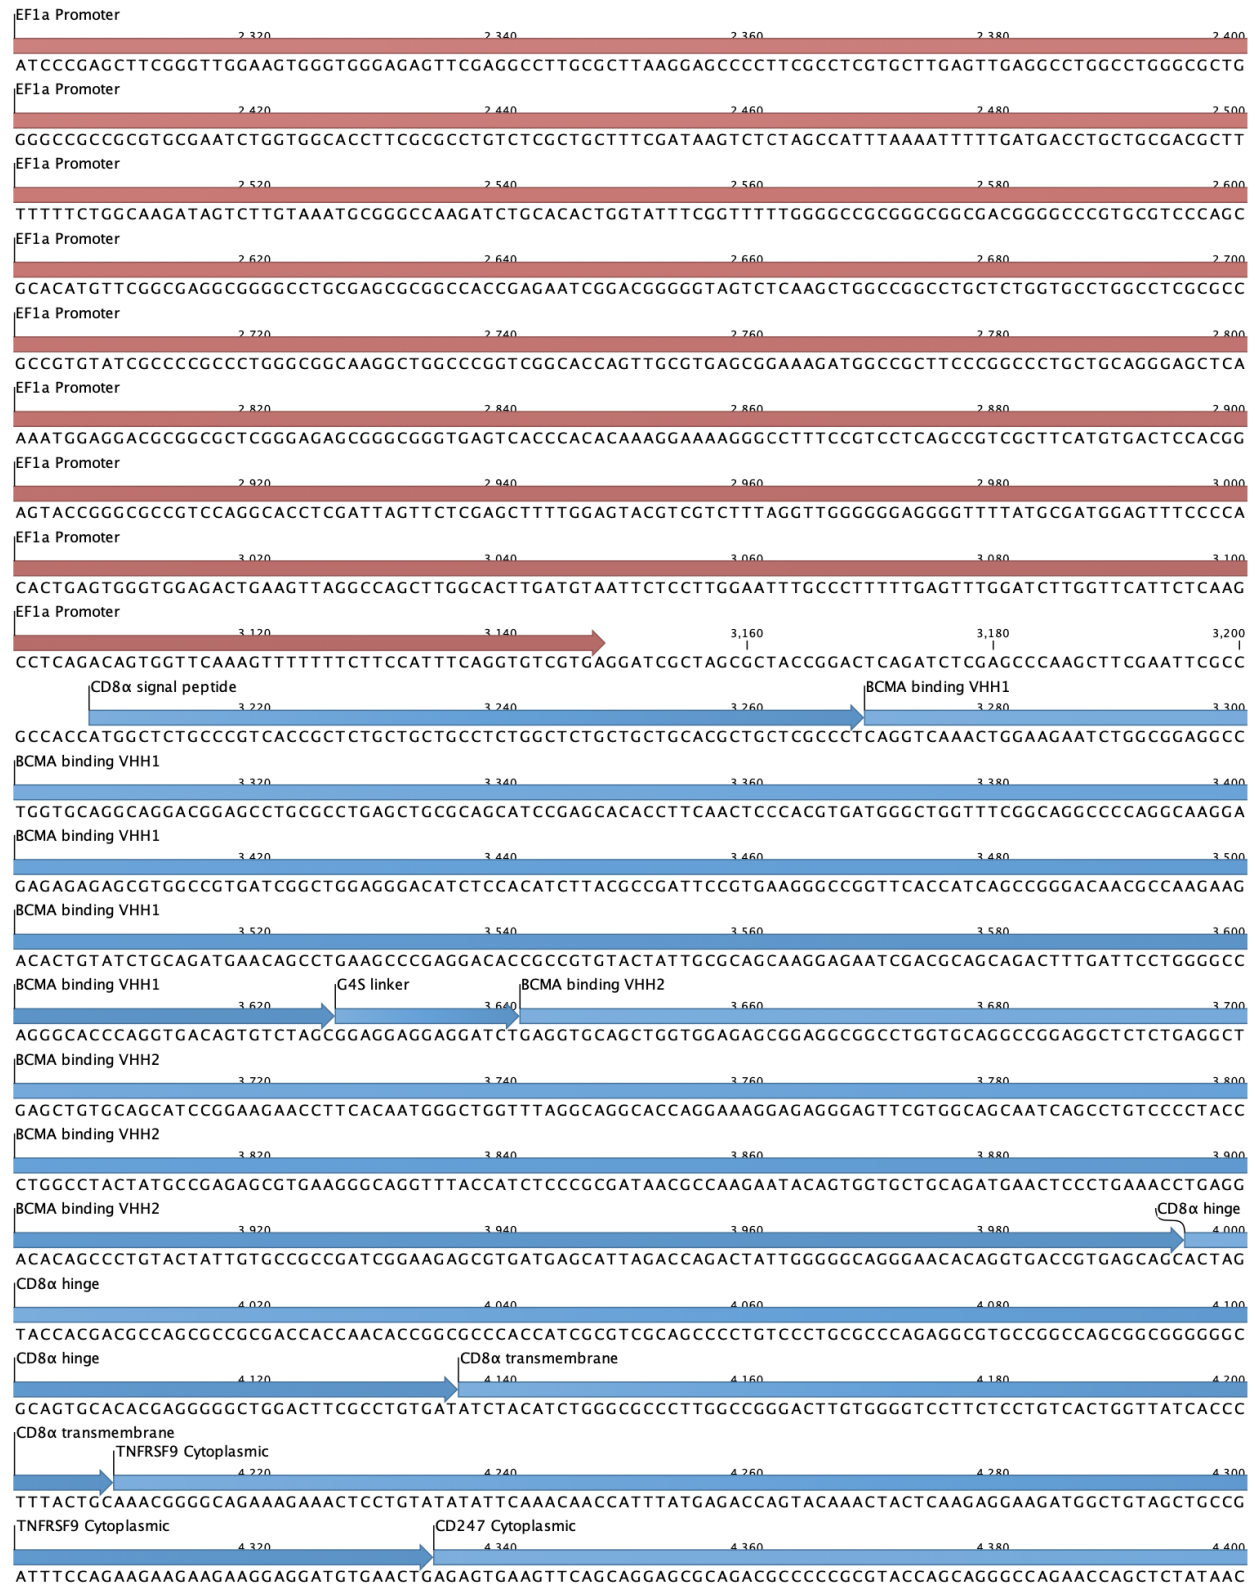

**Next generation sequencing analysis:** NGS for T cell receptor (TCR) gamma chain gene was performed on 2015 and 2023 peripheral blood samples at Duke University as part of clinical diagnosis. Targeted RNA-seq for the expression of 1600 hematologic neoplasm-related 1,600 genes and targeted DNA-seq for hematologic neoplasm-related 284 genes in two earlier duodenal tumor biopsy samples along with one reactive T cell sample were performed by Genomic Testing Cooperative (CA, USA) on tissue blocks. Exome RNA-Seq for the 2024 duodenal tumor was performed by Tempus Labs, Inc (IL, USA) by using IDT xGen Exome Research Panel v2 probe set that covers 19,433 genes of the human genome.

### Whole Genome Sequencing and Data Analysis

Whole genome sequencing (WGS) was performed by Novogene Corporation Inc (Sacramento, CA, USA) on a NovaSeq X Plus platform with 150 bp (base pair) paired-end read length. Data was evaluated and visualized mainly by using the CLC Genomics Workbench 20.0.4 (Qiagen) software.

For building the entire lentiviral cassette, a seeding contig of DNA encoding the anti-BCMA CAR-T was first derived from the sequence data available on the online patent file of Ciltacabtagene autoleucel (Patent Publication Number: US20230270786A1). The WGS reads were then mapped to this contig by using the "map reads to contigs" workflow of the "de novo sequencing" tool of the CLC Genomics Workbench 20.0.4 software (Qiagen) with default parameters. The genomic loci flanking the lentiviral vector integration site in the tumor genome was then identified by adding the final lentiviral vector sequence to the human reference genome as an additional chromosome and mapping the WGS reads to this modified reference by using the "assemble sequences to reference" workflow of the CLC Genomics Workbench 20.0.4 software (Qiagen) with default parameters. Additionally, the sequencing data was aligned to the human reference genome (GRCh38) by using their bioinformatics pipeline by Novogene Inc.. For this, Burrows-Wheeler Aligner (BWA) was used for mapping the paired-end clean reads and Sambamba was used for sorting the BAM files and marking the duplicate reads (Li 2010) (Tarasov 2015). Various software packages and tools were used for annotating the germline and somatic sequence variants in the samples. For single nucleotide polymorphisms (SNPs), GTAK and MuTect; for small insertions and deletions (InDels), GTAK and Strelka; for structural variants (SVs), DELLY; and for copy number variants (CNVs), Control-FREEC were used (DePristo 2011) (Cibulskis 2013) (Saunders 2012) (Rausch 2012) (Boeva 2012). BAM files were visualized by using the CLC Genomics Workbench 20.0.4 (Qiagen) software.

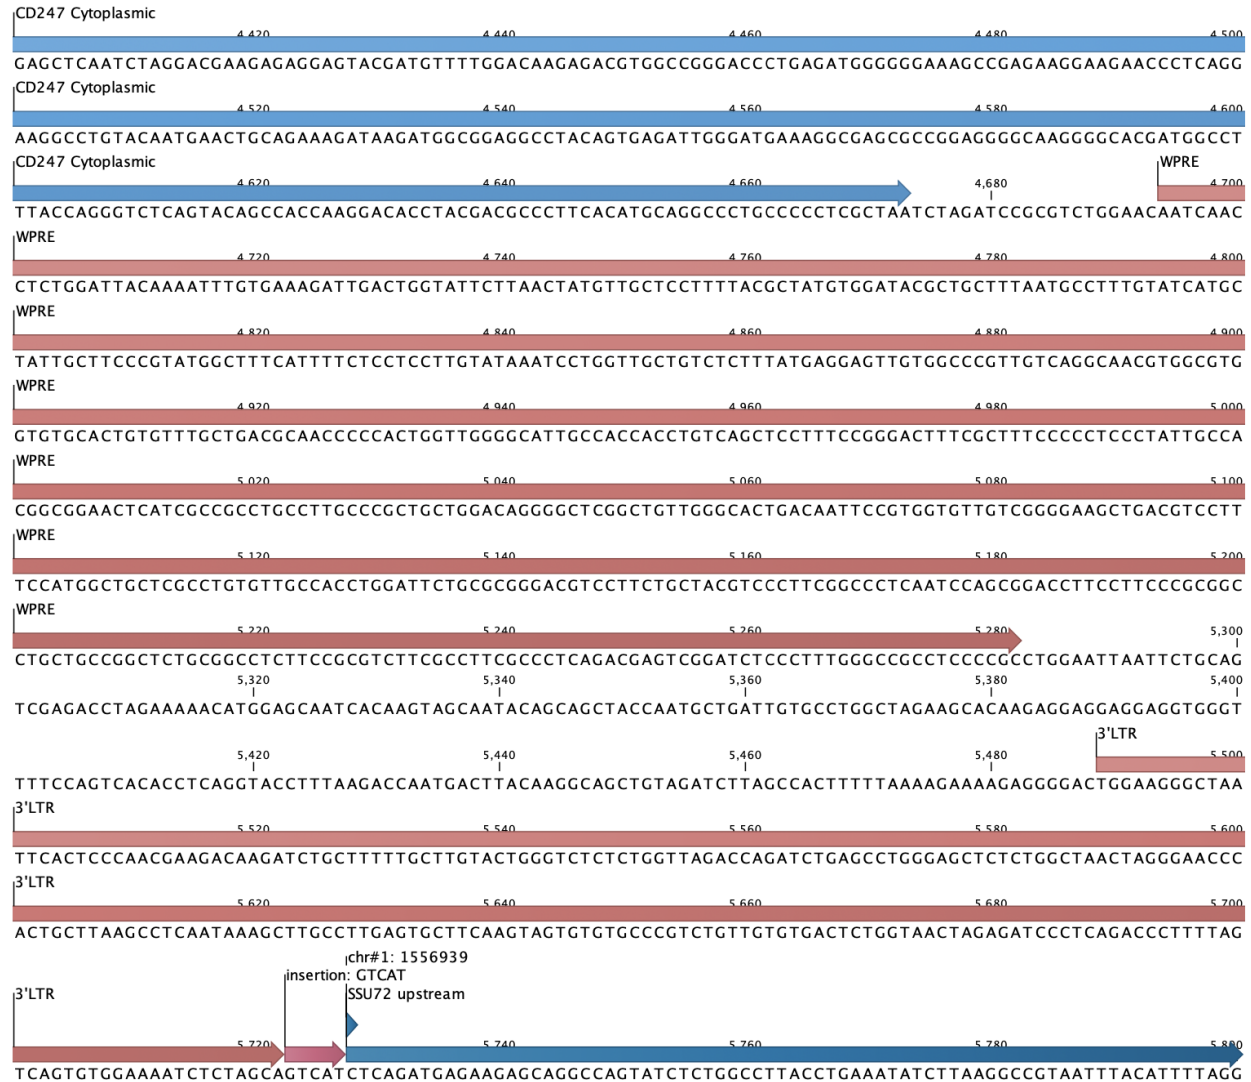

Figure S1: Sequence of the lentivirus carrying the anti-BCMA CAR-T expressing cassette and the corresponding genomic flanking regions at the integration site. Sequence was evaluated and annotated by using the CLC Genomics Workbench 20.0.4 software (Qiagen).

Figure S2: Biological pathways of the upregulated genes with somatic CNV. The genes located within the somatic CNV loci in the duodenal tumor sample in addition to being upregulated in the targeted RNA-seq were subjected to KEGG pathway analysis. Gene count is the number of genes found in the CNV gene list and FDR represents the significance of the enrichment of the genes in the corresponding pathway.

Table S1: Lists of germline SNPs, InDels, SVs, and CNVs in 2015 Blood Sample.

Table S1A: Germline single nucleotide polymorphisms (SNP) in the 2015 blood.

Table S3: List of the genes with expression values detected by targeted-RNAseq. 2 different duodenal tumor biopsies and reactive T-cells as control with a corresponding list of the genes located in the somatic CNV genomic loci.

Gene Name	Targeted RNAseq Expression Value			Fold Change (Tumor vs Tcell) (log2)	Somatic CNV Number (Duodenum vs 2015Blood)
	Duodenum Biopsy (June 2023)	Duodenum Biopsy (September 2023)	Reactive T-cells
